

SHARAN KUMAR

SOFTWARE ENGINEER | AI TRAINER | AI CODE QUALITY

sharansharry678@gmail.com | 89688-35896 | linkedin.com/in/sharansharry2 | github.com/sharan7860 | sharan-portfolio-tan.vercel.app

Software Engineer and AI Trainer with hands-on experience building AI-powered, full-stack applications, REST APIs, time-series analytics pipelines, and browser automation. Experienced in creating, reviewing, debugging, and refining AI-assisted code for correctness, reliability, maintainability, and clear technical communication. Brings strong Python and TypeScript/JavaScript development skills, practical testing and profiling experience, and an end-to-end mindset spanning design, deployment, monitoring, and iteration.

CORE CAPABILITIES

AI Training & Code Quality: Code curation, AI-generated code evaluation, prompt engineering, code review, refactoring, test generation, debugging, technical explanation

Software Engineering: Python, TypeScript, JavaScript, SQL, React.js, Vite, FastAPI, Node.js, REST APIs, JSON, Firebase Authentication

Testing, Reliability & Security: Unit and integration testing, Playwright, Selenium, profiling, performance optimization, accessibility, error handling, logging, monitoring, secure authentication

AI, Data & Deployment: TensorFlow, LSTM, ARIMA, Pandas, NumPy, Streamlit, Docker, Git, GitHub, Postman, Vercel, Render, Firebase

EXPERIENCE

Freelance AI Trainer | Self-Employed

Jul 2026 - Present

- Create and evaluate programming tasks, code examples, test cases, and technical explanations used to improve AI coding performance.
- Review AI-generated code for correctness, efficiency, reliability, style, and alignment with technical requirements; provide clear corrections and feedback.
- Design edge-case scenarios and quality checks across Python and JavaScript/TypeScript workflows to strengthen model reasoning and code quality.

Software Development Intern | Sonit Brilliance

Jan 2026 - Jun 2026

- Built a full-stack stock-analysis platform that unified real-time market data, forecasting, AI-driven recommendations, portfolio insights, and interactive dashboards.
- Developed ARIMA-based time-series pipelines using ADF testing and decomposition to support buy/hold/sell recommendation workflows.
- Delivered analytics, AI insights, alerts, and chatbot features; integrated Firebase Authentication and managed the SDLC through Vercel and Render deployment.
- Reviewed and refined AI-assisted code; improved full-stack performance, debugging, reliability, logging, monitoring, error handling, security, and accessibility.

SELECTED PROJECTS

AI-Powered Job Application Automation System | *Python, Playwright, Browser Automation*

- Built an end-to-end framework for Workday, Lever, and Greenhouse workflows, including authentication, dynamic form completion, uploads, and multi-step navigation.
- Implemented adaptive field mapping and selector detection; used automated testing and debugging to improve reliability across varied ATS forms.

AI-Powered Stock Market Intelligence Platform | *React, FastAPI, TensorFlow, OpenRouter*

- Developed an explainable recommendation engine combining technical indicators, sentiment signals, and confidence scoring, alongside a conversational AI assistant.
- Deployed full-stack services with Docker, Vercel, and Render, applying secure environment management, logging, and monitoring practices.

Stock Price Graph ML Model | *Python, TensorFlow, LSTM, Streamlit*

- Engineered an LSTM forecasting model using Yahoo Finance data and built an interactive Streamlit dashboard to communicate trends and prediction outputs.

EDUCATION

Bachelor of Technology in Computer Science Engineering | DAV Institute of Engineering and Technology, Jalandhar | 2026

Additional training: Front-End Development (2024); Python for Data Science - YBI (2023)
